

How GradeCalc Works

GradeCalc is a simple and efficient academic calculator designed to help students calculate their Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA).

SGPA Calculation

Step 1: Enter Subject Details

For each subject, enter:

- Subject Name
- CIA (Continuous Internal Assessment) Marks
- SEM (Semester Examination) Marks
- Credit Value

You can add additional subjects using the **Add Row** button.

Step 2: Calculate Total Marks

GradeCalc calculates the total mark for each subject using:

Total Mark = Ceiling((CIA + SEM) ÷ 2)

Step 3: Grade Assignment

Total Marks	Grade	Grade Point
90 - 100	O	10
80 - 89	A+	9
70 – 79	B+	8
60 - 69	B	7
50 - 59	C+	6
40 - 49	C	5
Below 40	RA	0

Step 4: SGPA Calculation

SGPA is calculated using:

$$\text{SGPA} = \Sigma(\text{Grade Point} \times \text{Credit}) \div \Sigma(\text{Credits})$$

The calculated SGPA will be displayed instantly.

CGPA Calculation

Step 1: Enter Semester Information

For each completed semester, enter:

- SGPA
- Total Credits Earned

Use the **Add Semester** button to include additional semesters.

Step 2: Calculate CGPA

GradeCalc computes the cumulative performance using:

$$\text{CGPA} = \Sigma(\text{SGPA} \times \text{Credits}) \div \Sigma(\text{Credits})$$

The result represents your overall academic performance across all semesters.

PDF Report

The **Download PDF Report** feature generates a complete academic report containing:

- Subject-wise marks
- Credits
- Grades
- Grade Points
- Calculated SGPA
- Semester-wise SGPA details
- Calculated CGPA

This report can be saved, printed, or shared for academic reference.
